

ÉFINOR

# FAST & MULTI PURPOSE INTERCEPTOR

Available in 5 models from 7.50 meters to 17 meters, this range of vessels benefits from the wide experience acquired by the Allais Shipyard in the design and construction of aluminium fast vessels.

The purpose of OUTBOARD interceptors is surveillance and interception in the 5 nautical miles coastal zone while that of the INBOARD interceptors is surveillance and interception in the area of territorial waters (12 nautical miles).

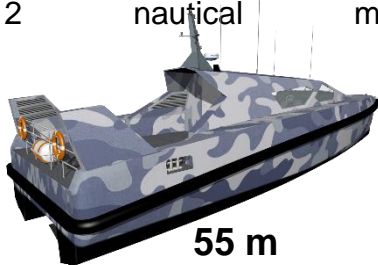

Fitted with an excellent reliability and efficiency, their shallow draft allows them to get close to the coasts, in shallow waters. Depending on the model and the installed power, the speed can reach more than 50 knots. Depending on the mission, they can be equipped with numerous options.

# PATROL BOATS SURVEYOR RANGES

Available in five models from 12 to 32 meters, the SURVEYOR range benefits from the wide experience acquired by the Allais Shipyard in the design and construction of aluminium fast vessels.

The vocation of the SURVEYOR vessels is to ensure the control of the maritime traffic in territorial waters. The InBoard diesel propulsion associated with the hydrojets propellers give the SURVEYOR a high level of

performance and a wide range of action.

Their shallow draft allows a navigation in the shallow waters of estuaries and rivers.

Depending on the model and the installed power, the speed of the SURVEYOR can reach more than 28 knots.

Depending on the missions, the SURVEYOR can be equipped with numerous options.
